Updating Data

Muhammad Qasim Pasta

qasim.pasta@sse.habib.edu.pk

Creating Nodes / Relationships

CREATE

- create nodes, relationships, or both in the graph.
- do not check duplicates
- specified node or relationship pattern already exists in the graph, a new one will be created

```
CREATE (n:Person {name: 'John'})
CREATE (n:Person {name: 'John'}) – [:KNOWS]-> (n:Person {name: 'Alien'})
```

MERGE

- match existing graph elements or create them if they don't already exist
- either match an existing element or create it if it doesn't exist

```
MERGE (n:Person {name: 'John'})
MERGE (n:Person {name: 'John'}) - [:KNOWS]-> (n:Person {name: 'Alien'})
```

Update

- SET clause
 - modify or update properties of nodes, relationships
 - used in conjunction with MATCH or MERGE clauses to specify the elements we want to update

```
MATCH (person:Person {name: 'John'})
SET person.age = 30, person.city = 'New York'
```

For array properties

```
MATCH (person:Person {name: 'John'})
SET person.interests = person.interests + 'Cooking'

MATCH (person:Person {name: 'John'})
SET person.interests = [interest IN person.interests WHERE interest <> 'Traveling']
```

Update Labels

• We can use SET clause to assign labels

MATCH (person:Person {employeeld: '123'})

SET person:Employee

Remove

- Opposite to SET
- Remove properties or labels
- Removing properties

MATCH (person:Person {name: 'John'})
REMOVE person.age

Removing Labels

MATCH (person:Person:Employee {employeeld: '123'})

REMOVE person:Employee

Delete

delete nodes and relationships

Deleting relationship only

```
MATCH (:Person {name: 'John'})-[r:KNOWS]->(:Person)
DELETE r
```

Deleting a node

MATCH (person:Person)
WHERE person.age > 60
DELETE person

Deleting node with relationships

```
MATCH (person:Person {name: 'John'})
DETACH DELETE person
```

Practice!

- Create a node with name "Daniel Kaluuya"
- Daniel Kaluuya acted in movie "Get Out" make this relationship
- Add the tag line "Gripping, scary, witty and timely!" for the movie "Get Out" and set released year to 2017
- Delete the actor "Emil Eifrem" from the database

More Practice

Assign :Actor label to all actors

Assign :Director label to all directors

Use PROFILE to see the performance of keyword

PROFILE MATCH (p:Person)
RETURN *

PROFILE MATCH (a:Actor)
RETURN *
